

MebesCruiser, an application in the SpaceCruiser Server system, is an interactive Web-based mask database viewer. It provides major navigation and browsing features and reads the industry-standard Mebes and Jobdeck format database. It can serve as a single user Mebes viewer or conference mode viewer, which makes communication possible among different parties over the Internet.

Features

- Real-time graphic information
- Pan/Zoom
- Measure
- Set Display
- Markers
- Conference mode
- Chat
- Insert Database
- Remove Database
- Support Job deck viewing

Secure Architecture

- Access control: username and password protection
- Data stream security: SSL
- Firewall protected

Multiple Pattern Files

MebesCruiser provides users the ability to view and debug multiple Mebes pattern files. The overlay of two or multiple gigabytes mask files ensures the efficiency of the database viewing and debugging.

Conference Mode

MebesCruiser allows instantaneous multi-party online viewing and discussion. The conference mode allows all parties to have visual verification and to exchange information while browsing the same database, providing a vehicle to resolve any ambiguity immediately.
